IDENTIFIERS *South Carolina

ABSTRACT

This is the sixth annual publication of pertinent characteristics related to public education in South Carolina. These characteristics have been selected and compiled to indicate the relative standing of each county or school district in each statistical category. The 108 ranked characteristics are arranged alphabetically by county or school district, as well as numerically in order of magnitude of the particular characteristic value. The characteristics are grouped under six general headings--population characteristics, economic characteristics, pupil characteristics, professional staff data, financial data, and miscellaneous data. FOREWORD

The 1976 edition of *Rankings of the Counties and School Districts of South Carolina* is the sixth annual publication of pertinent characteristics related to public education in the Palmetto State. The indications of its usefulness to State personnel, news media representatives and the community at large suggest that *Rankings* is a worthwhile enterprise. The information contained was derived from a variety of publications of the State Department of Education as well as other State and federal agencies. By selecting and compiling by computer the characteristics contained in these publications, it is possible to indicate the relative standing of each county or school district in each statistical category.

The 108 ranked characteristics appearing in this publication are arranged alphabetically by county or school district, as well as numerically in order of magnitude of the particular characteristic value. In using *Rankings,* please remember that a high value may be favorable in one instance and unfavorable in another. The source document for each characteristic is given on all tables so that the user may refer to original sources.

The broad range of information provided may serve as a means of interpreting, comparing and evaluating certain aspects of education throughout South Carolina. It may, for example, be helpful in preparing local school district profiles, public information brochures and needs assessment studies. Caution should be used in attempting to make direct qualitative comparisons between school districts, however, because many intangible factors help determine the quality of educational programs in many schools. This statistical information tells only a part of the story of education and can serve at most as circumstantial evidence in the evaluation of district services.

For instance, the district per pupil expenditure for current operations in South Carolina for 1974-75 ranged from a low of $596 to a high of $1,147, with the average being $894. One must know how that money was spent by each district before attempting to judge which district did the best job possible with the funds available. And, as always, when comparing statistics one must consider the socio-economic variables in our State, remembering that South Carolina is indeed a microcosm of American society. Dedicated involvement by school district personnel working hand in hand with the community can strengthen any school district. I sincerely hope this publication will motivate further interest and involvement in South Carolina's public school system.

Cyril B. Busbee
State Superintendent of Education

TECHNICAL NOTES

Statistics for Felton Laboratory School and South Carolina Youth Services Institutions were excluded from all tables except the two which relate to teachers' salaries, where the method of reporting in the source document did not allow these exclusions.

Prior to the 1973-74 school year, the enrollment was based on 10-day enrollment at the end of the 180-day reporting period; the official enrollment for 1974-75 was the 35-day enrollment at the end of the 180-day reporting period. As a result of this reporting alteration, the calculated changes in enrollment figures that are obtained by comparing results prior to the 1973-74 school year with those of 1974-75 are biased downward.

Tables such as the one which compares the current eighth grade enrollment to the first grade enrollment seven years earlier (Table 51) will become less meaningful in succeeding years if more students, particularly in the earlier grades, are placed in ungraded classrooms. Similarly, the nonpromotion rates for elementary grades might be distorted if many students are in ungraded classes. A table has been included this year to report the percentage of ungraded nonpromotions.

Tables relating to employment in various categories display estimates of non-agricultural wage and salary employment by the county in which the work was performed rather than by the county in which the workers resided. This reporting is consistent with the reporting in the 1975 edition. As in the 1975 edition, the labor force statistics which were used to calculate unemployment percentages (Table 33) were reported on a residence basis rather than by place of work. However, the unemployment data may not be comparable to that reported in previous years in that the data were adjusted to the Current Population Survey Benchmark.

The financial tables include expenditures and revenue for area vocational centers and county boards. The county board monies were distributed on the basis of the average daily attendance (ADA) of the respective districts, while the area vocational center monies were distributed to the respective districts on the basis of the ADA of students attending the centers. The ADA percentages that were used in the distribution were calculated by computer to a degree of precision sufficiently high so that the final results were accurate to the nearest cent. The tables show category amounts rounded to dollars, but show per pupil amounts rounded to cents. Because of the high degree of precision used in the calculations, the districts' pro rata shares may differ slightly from the amounts obtained by applying percentages consisting of several significant figures. Thus, users may find slightly different figures in other publications in which the percentages were rounded prior to the computation of district allocations of the county board and area vocational center monies.

Several tables were made possible by special computer runs of data from the Basic Educational Data System (BEDS) File and from the State Aid File. These sources are cited in the table footnotes where applicable. One ranked characteristic (Table 108 – Area in Square Miles) was extracted from the South Carolina Interactive Management Information System (SCIMIS).

This edition of *Rankings* includes a table giving the attrition rate of teachers. The procedures that were employed in obtaining teacher counts and attrition rates are consistent with the 1975 edition.

Statistics for personnel in special education schools are included in tables relating to professional staff. In the 1975 edition statistics for these persons were excluded. Additionally, staff in area vocational centers were not included in the various staff tables due to the infeasibility of allocating such staff to individual districts.

For the convenience of the user, corresponding tables are numbered the same as in the 1975 edition. However, in some instances titles and/or interpretations may have changed somewhat due to changes in the source documents. Tables 2–9 and 11–19 concerning 1960 and 1970 census information are reproductions of the corresponding tables of the 1975 edition and have been color coded for quick reference.

ACKNOWLEDGMENT

The 1976 edition of the *Rankings of the Counties and School Districts of South Carolina* represents a combined effort of personnel primarily from the Office of Research, Education Products Center, Educational Data Center, and Office of Technical Assistance and Surveys within the Division of Administration and Planning. Many other individuals from within the State Department of Education actively shared in and contributed to the development of the 1976 edition.

Appreciation is extended to all persons who made this publication possible.

Paul D. Sandifer, Director
Office of Research

LIST OF TABLES

Characteristics which are ranked by county are followed by a "c"; those ranked by district are designated by a "d."

Table Number(s) **Page Number(s)**

1–21

I. POPULATION CHARACTERISTICS

Total Population

1 As of July 1, 1974 (c) 1
2 In 1970 (c) 3
3 Percent Change, 1960-1970 (c) 4

Age Groups, 1970

4 Percent Under 18 Years (c) 6
5 Percent 18-64 Years (c) 7

---

[a] Preliminary 1974 data from South Carolina, Employment Security Commission, Manpower Research and Analysis Section, *South Carolina's Manpower in Industry,* July 1975.

[b] The labor force data used in deriving this table were adjusted to the Current Population Survey Benchmark and represent employment and unemployment by place of residence. These data are not comparable to place-of-work data. Workers involved in labor disputes are included among the employed. In addition to nonagricultural wage and salary employment, total employment also includes agricultural workers and nonagricultural self-employed, unpaid family and domestic workers.

---

[a] Source: South Carolina, County Superintendents, "Annual Reports of the County Superintendents" (1966, 1975).

[b] Official 10-day enrollment.

[c] Official 35-day enrollment.

[d] Due to the difference in reporting official enrollment for 1966 and 1975, the "Percent Change" figures are biased downward.

[e] Excludes 57 students from Felton Laboratory School and 308 students from South Carolina Youth Services.

[a] Includes non-kindergarten teachers who can be classified in at least one of the following categories: persons teaching at least 180 minutes/day, special education teachers, teachers paid from non-federal funds, teachers under full-time vocational contracts (but not at vocational centers), and teachers paid from ESEA or other federal grants. To be included in the count for either school year, a teacher had to be employed at least 100 days in one or more of the previously listed categories. Uncertified teachers are excluded.

[b] Source: South Carolina, State Department of Education, Educational Data Center, special computer run derived from State Aid File data.

[c] Not derived from district figures, denotes attrition of teachers from the State as a whole.
